

$Z$	Hurst value	variation characteristics of meteorological elements
$Z \leq -1.96$	$H > 0.50$	The trend of reduction in past is significant, and it will continue to decrease in the future.
$Z \leq -1.96$	$H < 0.50$	The trend of reduction in past is significant, but it is likely to reverse in the future.
$-1.96 < Z \leq 0$	$H > 0.50$	The trend of reduction in past is not significant, and it will continue to decrease in the future.
$-1.96 < Z \leq 0$	$H < 0.50$	The trend of reduction in past is not significant, but it is likely to reverse in the future.
$0 < Z \leq 1.96$	$H > 0.50$	The trend of increase in past is not significant, and it will continue to increase in the future.
$0 < Z \leq 1.96$	$H < 0.50$	The trend of increase in past is not significant, but it is likely to reverse in the future.
$Z > 1.96$	$H > 0.50$	The trend of increase in past is significant, and it will continue to increase in the future.
$Z > 1.96$	$H < 0.50$	The trend of increase in past is significant, but it is likely to reverse in the future.
